🏠 Palestine - Gaza

SUMMARY

Frontend Engineer specializing in building scalable, high-performance web applications using React, Next.js, and TypeScript. Experienced in developing responsive user interfaces, reusable component architectures, and modern frontend workflows. Passionate about writing clean, maintainable code and optimizing performance to deliver seamless user experiences. Strong experience working with modern frontend tools and collaborating with remote teams.

EXPERIENCE

Frontend Engineer Vilniaus, Lithuania
[Talentai](#) April 2026 - Present

- Improved and optimized internal website pages with fully responsive designs across all screen sizes.
- Refactored and optimized the project structure by implementing a modular architecture, integrating React Query, and improving Redux state management for better scalability and maintainability.
- Developed and rebuilt a complete real-time chat system (frontend & backend) supporting multiple user roles, enabling communication between companies, candidates, and team members with WhatsApp-like messaging features such as message deletion and conversation management.
- Implemented and integrated French localization across the platform, ensuring a smooth and user-friendly multilingual experience.
- Worked directly on developing an AI-powered feature using Amazon Bedrock that enables automatic job post generation by providing simple keywords or input data, where the system intelligently analyzes the information and generates complete and professional job descriptions.
- Developed and implemented a complete notification system across the platform, ensuring smooth and fast real-time functionality across different pages and workflows to enhance user experience and engagement.

Frontend Engineer (Reactjs, Nextjs) May 2025 - Present
[Freelancer](#)

- Company name:
Almasraa
- Link (Website field): <https://almasraa.com/>
- Contributed to structuring the project into modules and collaborating with the team based on the project requirements document (PRD). Developed the platform landing page to clearly present the company's vision and the value of the project. Integrated the landing page with Supabase to handle form submissions and connect them to the admin panel.

Frontend Engineer (Reactjs) Gaza-Palestine
[Portals for Business Development](#) February 2023 - October 2023

- Turned Figma and XD designs into responsive pages using HTML, CSS, and JavaScript.
- Worked with the SEO team to improve website visibility on search engines.
- Integrated with backend APIs to fetch and display data, ensuring seamless application functionality.

Frontend Engineer (Reactjs, Nextjs) Gaza-Palestine
[Dash](#) April 2022 - September 2023

- Developed and maintained front-end applications using the Next.js framework.
- Translating designs and wireframes into high-quality code.
- Debugging and maintaining applications.

Frontend Engineer (Reactjs)
Dot

United Arab Emirates
February 2023 - August 2023

- Refactored existing codebase to improve cleanliness, performance, and maintainability.
- Managed application state using Redux and Context API for dynamic UI updates.
- Optimized user experience by creating intuitive and accessible interfaces.
